

Endress+Hauser strengthens commitment in India

Endress+Hauser has built a state-of-the-art production facility at its Aurangabad site

Endress+Hauser has opened a new production building on its campus in Aurangabad, India. This milestone not only underlines the company's commitment to the region but also reaffirms its continued investment in world-class production and working environments.

Ceremonial inauguration in a family setting

The formal inauguration of the building took place on 1 August 2023 in the presence of the Endress+Hauser Temperature+System Products management, as well as high-ranking representatives of various industry associations. After the official inauguration of the new building, a family party was held, giving employees' relatives the opportunity to visit the new premises. In addition, employees celebrating anniversaries were honored for their many years of service to the company in the presence of their family members. The day was rounded off with an evening banquet at which traditional Indian cuisine was served.

Sustainable infrastructure and office concept

The new production building is a modern facility for the manufacture of temperature measurement technology and system products as well as liquid analysis. The two-story building covers a total area of 5,400 square meters and was realized with an investment of 4.4 million euros. The first floor houses new production spaces for Endress+Hauser Temperature+System Products, offices and a modern cafeteria. The second floor houses production and office space for Endress+Hauser Liquid Analysis.

To minimize the environmental impact, a solar installation covers 80 percent of the building's electricity consumption, in line with the company's goal of CO₂ neutrality. Special insulating glass reduces heat transmission and increases the building's energy efficiency. The sustainable concept supports internal and external collaboration and promotes an inspiring work environment.

Continuous growth in the region

Since its establishment 11 years ago, the site has become a key location for the production of high-quality products for customers in India and Southeast Asia. The newly constructed production building represents a strategic investment to support continued growth in the region and to serve these emerging markets even more efficiently with premium Indian-made products.
